Sample wiki page with R code and chart generated

```
1: require(gvis)
2: M <- gvisMotionChart(Fruits, "Fruit", "Year", options = list(width = 550,
3:                         height = 450))
4: print(M, "chart")
```

![Chart of fruit sales](chart.png)

Simple syntax highlighted & preview

Note: Remember that this is only a preview, and has not yet been saved!

1. Text output

This code:

```r
R() 1:10
```

Produces:

```
[1] 1 2 3 4 5 6 7 8 9 10
```
**Escaping Wiki syntax**

```
| R(wikisyntax==0) | cat("\_hello_\") | R |
```

```
\_hello_\_  
```

**Parsing Wiki Syntax**

```
| R(wikisyntax==1) | cat("\_hello_\") | R |
```

```
hello  
```

**Simple Interface: list runs/datasets**

![Image of list raw datasets](image-url)

- **Sample dataset**: This dataset was created as part of the sample data for r_test.
- **We are working on this dataset**: This will soon be changed.
- **A really old dataset**: This dataset is outdated.

<table>
<thead>

Optional pop up helpers to edit plugin calls based on GUI

1. Basic image

RR (R syntax also)

<table>
<thead>
<tr>
<th>RR Code</th>
</tr>
</thead>
</table>
| ```
if(require(Cairo)) {
  install.packages("Cairo", repos="http://ftp.heanet.ie/mirrors/cran.r-project.org")
```
<table>
<thead>
<tr>
<th>R Code</th>
</tr>
</thead>
</table>
| ```
x <- c(1:10)
y <- x^2
plot(x,y)
```
Nice word clouds from just a few lines of R code

Custom maps with GoogleVis

```r
G5 <- gvisGeoMap(CiudadPopular, locationvar="Ciudad", numvar="Popular",
                 options=list(region="ES", height=350,
                                dataMode="markers",
                                colors=[0xFF8747, 0xFFB57F, 0xe06600]))

# plot(G5)
print(G5, "chart")
```

Spanish city popularity after UseR!2013 ;-)
Embedded plot.ly charts
Fun with the Lognormal distribution

Embedded plot.ly charts: Heatmaps
Custom output for higher control on figure results (pdf)

```r
device.height = convertHeight(sum(qc("heights")), "in", valueOnly=TRUE)
pdf("test.pdf", height = device.height)
grid.draw(g)
invisible(dev.off())
```

---

Mobile display mode when needed

---

**bigger font size and buttons for human fingers in mobile devices**

---

**rCharts**

rCharts is an R package to create, customize and publish interactive javascript visualizations from R using a familiar lattice style plotting interface. It has been created by Ramanth Valiyathan. See more here: [http://rcharts.io/](http://rcharts.io/)

Below you will find a series of examples of nice charts using rcharts http://rcharts.io and the corresponding javascript library used in each case.

Page contents:

- **Introduction**
- **Examples**
- **Credits**
- **License**
rCharts Interactive figures: NYT 512 Paths to White House

Obama has 106 ways to win
83% of paths

Romney has 18 ways to win
14% of paths

4 ties
3.1% of paths

rCharts: show data on hover & control vars. displayed

Toggle display of variables by clicking on them in legend
rCharts: Easy creation of georeferenced custom maps

```r
map3 <- Leaflet$new()
map3$setView(c(51.505, -0.09), zoom = 13)
map3$marker(c(51.5, -0.09), bindPopup = "Hi, I am a popup")
map3$marker(c(51.495, -0.083), bindPopup = "Hi, I am another popup")
map3$setURL("http://r.tiki.org/ChartsLibraries/Leaflet")
map3$save("map3.html")
```

---

rCharts: Interactive magnification of figure regions

```r
n2 <- nPlot(Sepal.Length ~ Sepal.Width, data = sepal, type = "scatterChart",
group = "Species")
n2$xAxis(axisLabel = "Sepal.Width")  # add x axis label
n2$yAxis(axisLabel = "Sepal.Length")
n2$print("nvd3Scatter")
n2$save("n2.html")
```

---
rCharts: Select time range on X and vars on Y

Move slider ends on X axis to filter on new time frame and toggle variables clicking on legend.

Clickme: Interactive filtering charts by point names
Clickme: highlight data points with partial filter match

Animation in time-based charts
Ecoengine: distribution maps based on database records

Ecoengine: Photo viewer based on remote ecological data

<table>
