Optional pop up helpers to edit plugin calls based on GUI

1. Basic image

RR (R syntax also)

Same as PluginR, but allowing the execution of potentially dangerous commands once the admin has validate

echo

Show a code block with the R commands to be run before running them (similarly to the echo command)

wikisyntax

Choose whether the output should be parsed as wiki syntax (Optional). Options: 0 (no parsing, default), 1 (parse)

LoadAndSave

Yes

Load a previous R user session (.RData, if any) for the same wiki page so that R object will be used while you, and

R Code

1. if(require(Cairo)){
2.  install.packages("Cairo", repos="http://ftp.heanet.ie/mirrors/cran.r-project.org/")
3. }

x<-r(1:10)
y <- x*x
plot(x,y)
Nice word clouds from just a few lines of R code

Custom maps with GoogleVis

```r
G5 <- gvisGeoMap(CiudadPopular, locationvar="Ciudad", numvar="Popular",
      options=list(region="ES", height=350,
                     dataMode="markers",
                     colors=[0xFFF747, 0xFFF851, 0x006000]))

# plot(G5)
print(G5, "chart")
```

rCharts

rCharts is an R package to create, customize and publish interactive javascript visualizations from R using a familiar lattice style plotting interface. It has been created by Ramnath Vaidyanathan. See more here: http://rcharts.io/

Below you will find a series of examples of nice charts using rcharts http://rcharts.io and the corresponding javascript library used in each case.
