Sample wiki page with R code and chart generated

```r
require(gvis)
M <- gvisMotionChart(Fruits, "Fruit", "Year", options = list(width = 550,
height = 450))
print(M, "chart")
```

Simple syntax highlighted & preview

Note: Remember that this is only a preview, and has not yet been saved!

1. Text output

This code:

```r
1:10
```

Produces:

```
[1] 1 2 3 4 5 6 7 8 9 10
```
Escaping Wiki syntax

```r
[[wikisyntax]]cat("\_hello\_")[[R]]
```

__hello__

Parsing Wiki Syntax

```r
{{{wikisyntax}}})cat("\_hello\_"){{{R}}}
```

hello

Simple Interface: list runs/datasets

```
<table>
<thead>
<tr>
<th>List raw datasets</th>
<th>Results</th>
<th>Edit dataset (if chosen)</th>
<th>Insert new dataset</th>
</tr>
</thead>
</table>
| ![Table of datasets](image)
```

- Sample dataset: This dataset was created as part of the sample data for r_test.
  - From user: admin
  - Dataset file: 1
  - Minimum value for axis X: 10
  - Maximum value for axis X: 10
  - Last Modified: 2013-08-30 17:37

- We are working on this dataset: This will soon be changed.
  - From user: admin
  - Dataset file: 21
  - Minimum value for axis X: 30
  - Maximum value for axis X: 30
  - Last Modified: 2012-05-11 16:57

- A really old dataset: This dataset is outdated.
  - From user: admin
  - Dataset file: 100
  - Minimum value for axis X: 110
  - Maximum value for axis X: 110
  - Last Modified: 2012-05-11 16:57
Simple interface: Results for one run/dataset

Results

Values for X:
min: 1
max: 10

Those are the results:

Results from 1*10: 10
No attachment to display in this raw dataset

Graph with xmin 1 & xmax 10 and y=x^2

Simple templates for custom output
Flexible databases in Trackers to hold run parameters

Optional pop up helpers to edit plugin calls based on GUI

1. Basic image

RR (R syntax also)

Same as PluginR, but allowing the execution of potentially dangerous commands once the admin has validate

echo

Show a code block with the R commands to be run before running them (similarly to the echo command)

wikisyntax

Choose whether the output should be parsed as wiki syntax (Optional). Options: 0 (no parsing, default), 1 (parsing)

LoadAndSave

Load a previous R user session (.RData, if any) for the same wiki page so that R object will be used while you

R Code

```
1  if(require(Cairo)){
2      install.packages("Cairo", repos="http://ftp.heanet.ie/mirrors/cran.r-project.org/")
3  }
```
Nice word clouds from just a few lines of R code

Custom maps with GoogleVis

```r
G5 <- gvisGeoMap(CiudadPopular, locationvar='Ciudad', numvar='Popular',
                 options=list(region='ES', height=350,
                                dataMode='markers',
                                colors=[0xFF8747, 0xFFB581, 0x060000]))

# plot(G5)
print(G5, "chart")
```

Spanish city popularity after UseR!2013 ;-}
Embedded plot.ly charts

Fun with the Lognormal distribution

Embedded plot.ly charts: Heatmaps

Morning

Afternoon

Evening
Custom output for higher control on figure results (pdf)

```r
10 device.height = convertHeight(sum(g[["heights"]]), "in", valueOnly=TRUE)
11 pdf("testr.pdf", height = device.height)
12 grid.draw(g)
13 invisible(dev.off())
```

Mobile display mode when needed

*bigger font size and buttons for human fingers in mobile devices*

rCharts

rCharts is an R package to create, customize and publish interactive javascript visualizations from R using a familiar lattice style plotting interface. It has been created by Ramanath Valiyananth. See more here: [http://rcharts.io/](http://rcharts.io/)

Below you will find a series of examples of nice charts using rcharts [http://rcharts.io](http://rcharts.io) and the corresponding javascript library used in each case.

Page contents:

- [Introduction](#)

- [License](#)
rCharts Interactive figures: NYT 512 Paths to White House

Obama has 106 ways to win
- 83% of paths

Romney has 18 ways to win
- 14% of paths

rCharts: show data on hover & control vars. displayed

Toggle display of variables by clicking on them in legend
rCharts: Easy creation of georeferenced custom maps

```r
map3 <- Leaflet$new()
map3$setView(c(51.505, -0.09), zoom = 13)
map3$marker(c(51.5, -0.09), bindPopup = "Hi, I am a popup!")
map3$marker(c(51.495, -0.083), bindPopup = "Hi, I am another popup!")
map3$save("map3.html")
```

rCharts: Interactive magnification of figure regions

```r
n2 <- nPlot(Sepal.Length ~ Sepal.Width, data = sepal, type = "scatterChart",
group = "Species")
n2$xBBox(xAxisLabel = "Sepal.Width")  # add x axis label
n2$yBBox(axisLabel = "Sepal.Length")
#n2$print("nvd3Scatter")

n2$Lib2[2] <- "http://r.tiki.org/rcharts_libraries/nvd3"
n2$save("n2.html")
```

rCharts: Select time range on X and vars on Y

Clickme: Interactive filtering charts by point names

move slider ends on X axis to filter on new time frame and toggle variables clicking on legend
Click me: highlight data points with partial filter match

○ Show names (500)

Groups

- Noise (279)
- Significant (221)

Animation in time-based charts

Violent Crime Rate in Decade 1961-1970

Crime Rate: Low, Medium, High
Ecoengine: distribution maps based on database records

Ecoengine: Photo viewer based on remote ecological data
