Plot.ly Charts using PluginR and Tiki

See
- https://plot.ly/
- https://plot.ly/api/r/

The Plotly R graphing library allows you to create and share interactive, publication-quality plots in your browser. Plotly is also built for working together, and makes it easy to post graphs and data publicly with a URL or privately to collaborators.

Page contents
- Installing Plotly
- Overlaid Histograms
- Log-normal Boxplot

- More types of charts...
- Collaborating and Sharing

Installing Plotly

```{r echo="0", cacheby="pagename", wikisyntax="0"}
# Installing Plotly
# -----------------------

# Install de required packages if you don't have them yet
if(!require(devtools)){ install.packages("devtools", repos="http://ftp.heanet.ie/mirrors/cran.r-project.org/") }
require("devtools")

if(!require(RCurl)){ install.packages("RCurl", repos="http://ftp.heanet.ie/mirrors/cran.r-project.org/") }

if(!require(bitops)){ install.packages("bitops", repos="http://ftp.heanet.ie/mirrors/cran.r-project.org/") }

if(!require(RJSONIO)){ install.packages("RJSONIO", repos="http://ftp.heanet.ie/mirrors/cran.r-project.org/") }

# Next, install plotly (a big thanks to Hadley, who suggested the GitHub route):

if(!require(plotly)){ devtools::install_github("plotly/R-api") }
```
# ...  
# * DONE (plotly)

# Then sign-up like this (adapt username and email to your choice) or at  
https://plot.ly/:
require(plotly)
response = signup (username = 'yournewusername', email=  
'youremail@example.com')

# You'll get as output in the R console:
#
## Thanks for signing up to plotly!
##
## Your username is: yournewusername
##
## Your temporary password is: yourtemppassword. You use this to log into  
your plotly account at https://plot.ly/plot.
##
## Your API key is: API_Key. You use this to access your plotly account  
through the API.
##
## To get started, initialize a plotly object with your username and  
api_key, e.g.
## >>> p <- plotly(username="yournewusername", key="API_Key")
## Then, make a graph!
## >>> res <- p$plotly(c(1,2,3), c(4,2,1))

# And we're up and running! You can change and access your password and key  
in your homepage.

{RR

Overlaid Histograms

{RR(echo="0", cacheby="pagename", wikisyntax="0"})
# 1. Overlaid Histograms:
# ------------------------
require(plotly)
p <- plotly(username="yournewusername", key="API_Key")

x0 = rnorm(500)
x1 = rnorm(500)+1
data0 = list(x=x0,
         type='histogramx',
         opacity=0.8)
require(plotly)
p <- plotly(username='USERNAME', key='API_KEY')

x <- c(seq(0,0,length=1000),seq(1,1,length=1000),seq(2,2,length=1000))
y <- c(rlnorm(1000,0,1),rlnorm(1000,0,2),rlnorm(1000,0,3))
```r
s <- list(
  type = 'box',
  jitter = 0.5
)
layout <- list(
  title = 'Fun with the Lognormal distribution',
  yaxis = list(
    type = 'log'
  )
)

response <- p$plotly(x, y, kwargs = list(layout = layout, style = s))

#browseURL(response$url)
# Again, in Tiki, you can plot the graph in a wiki page by means of an
iframe to the response$url = unlist(response[1])

More types of charts...

For more examples of chart types possible with Plot.ly and R, see:

- [https://plot.ly/api/r/](https://plot.ly/api/r/)

Collaborating and Sharing

```markdown
# Collaborating and Sharing: You’re in Control
# ---------------------------------------------

# Keep in mind that:
#
# (1) You control if graphs are public or private, and who you share with
# (like Google Docs)
# (2) Public sharing in Plotly is free (like GitHub).
#
# To share privately, press “Share” in our GUI or share with your script.
# Users you share with get an email and can edit and comment on graphs.
# That means no more emailing data, graphs, screenshots, and spreadsheets
# around: you can do it all in Plotly.
# You can also save and apply custom themes to new data to avoid re-making
# the same graphs with new data.
# Just upload and apply your theme.
```
